

# OLIVIA “O. J.” WILCOX

(561) 248-1266 | WEST PALM BEACH, FL | OPEN TO REMOTE | [oj@learnwithoj.com](mailto:oj@learnwithoj.com) | [linkedin.com/in/learnwithoj](https://linkedin.com/in/learnwithoj)

## PROFILE SUMMARY

Senior SRE and SWE with deep expertise in GitHub Actions, CI/CD automation, and developer tooling. I build enterprise platforms in Go and Python, design complex GitHub Actions workflows, and integrate systems via REST/GraphQL APIs. At American Express, I scaled an automation platform to 100k+ runs per month, standardized GitHub Actions/Jenkins pipelines, and shipped a Golang service from concept to production in 3 months. At DataSnipper I led cloud migrations using Terraform IaC and built observability dashboards. Strong background in operations, automation-first mindset, and proven ability to mentor engineers while delivering high-impact tooling.

### Selected Impact:

- Designed and maintained GitHub Actions workflows with custom actions to enforce code quality, security gates, and contribution guidelines across enterprise teams.
- Scaled enterprise GitHub-integrated automation platform to 100k+ runs/month, powering enterprise-wide GitHub Actions workflows.
- Built API monitoring microservices with REST endpoints, queue integrations, and React UI for SLA tracking.
- Shipped Golang/Couchbase Automation Catalog with REST/GraphQL APIs from concept to prod in ~3 months (vs 18-22 months elsewhere).

## RELEVANT EXPERIENCE

### SENIOR SITE RELIABILITY ENGINEER

#### Learn with O.J. - Founder

Oct 2025 – present

- Transformed client MVP from single-server deployment to production-ready Kubernetes architecture with CI/CD, observability, and automated scaling.
- Migrated client monolith to containerized microservices, reducing deployment complexity and enabling independent team releases.
- Mentored 3 engineers preparing for senior-level interviews, with 2 receiving offers at target companies.
- Guided engineer through resume revision and interview prep, resulting in promotion to Senior SWE.

### SENIOR SITE RELIABILITY ENGINEER

#### DataSnipper – Cloud Platform Team

Jan 2025 – Oct 2025

- Engineered and deployed cloud infrastructure across 4 Azure regions and 3 environments (dev, staging, prod) using Terraform and GitHub Actions CI/CD.
- Migrated 12 core application workloads from AWS to Azure within 6-week deadline, leveraging Azure Container Apps, ServiceBus, and Front Door with zero production incidents during transition.
- Designed 6 real-time observability dashboards and configured 20+ Azure alerts for mission-critical metrics.
- Partnered with Product Engineering to deliver live demos and enable adoption of new observability tools, improving mean time to detect (MTTD) and resolve (MTTR).
- Established automated performance thresholds and remediation pathways to improve MTTD and MTTR.
- Migrated 180+ Playwright test cases from Angular to React, maintaining 100% end-to-end test coverage across frameworks.
- Created 5 infrastructure runbooks covering deployment, monitoring, and incident response for engineering teams.

### ENTERPRISE SITE RELIABILITY ENGINEER & SENIOR SOFTWARE ENGINEER II

#### American Express - Global Infrastructure

Oct 2019 – Jan 2025

- Scaled SRE tooling to 100k+ automations/month, introducing Prometheus/Grafana + Moogsoft AIOps to shorten detection and response.
- Cut deployment times to < 5 minutes by standardizing GitHub Actions/Jenkins pipelines and containerizing services on OpenShift.
- Integrated observability and AIOps by leveraging Prometheus, Grafana, Moogsoft, and automation with Ansible, and enabled proactive monitoring, faster incident response, and improved system resiliency.
- Rebuilt API Monitoring tool into microservices with SLA monitoring for third-party APIs, adding REST, queues, alerters, and a React UI to prevent silent failures.
- Architected the Automation Catalog, a Golang-based developer tooling platform with Couchbase backend and React UI, delivering from concept to production in 3 months vs. the typical 18-22 month cycle.
- Engineered ZEUS from scratch, in a 2-week sprint, a Flask-based compliance application to track High Availability Architecture adherence with DART (chaos testing) and ECRU (OpenShift data views).
- Integrated Earlybird security scans into CI/CD pipelines, establishing vulnerability detection and remediation workflows across deployment processes.
- Hired, mentored, and coached junior engineers through knowledge-transfer sessions and detailed documentation.
- Standardized engineering best practices across a diverse stack, including Python, Golang, React, Couchbase, Kafka Pub/Sub, Slack integrations, and CI/CD automation, aimed at aligning development and SRE efforts with enterprise objectives.

### SENIOR SOFTWARE ENGINEER

**Dycom Industries - Field Systems**

**May 2018 – Oct 2019**

- Developed multi-tiered, cloud-native systems to support remote construction teams with limited internet connectivity, leveraging Python, Node.js, Angular 6–8, Bash, and Terraform IaC to deliver resilient, field-ready applications.
- Evaluated and recommended a managed Kubernetes platform and designed cloud governance policies and architecture diagrams to strengthen infrastructure reliability and compliance for enterprise-scale telecom operations.
- Led build and release engineering for microservices applications using Node.js, Flask REST APIs, Angular 7 & 8 UIs, and RabbitMQ pub/sub messaging.
- Enhanced development workflows by architecting modular application designs, improving system maintainability, and accelerating feature delivery for clients, including AT&T, Verizon, and Comcast.
- Mentored junior engineers on writing robust unit tests and implementing monitoring tools, while promoting engineering best practices through peer reviews and process optimization.

TECHNICAL CO-FOUNDER

**New Media Studios, LLC**

**Jan 2014 – Sept 2022**

- Designed and deployed cloud-hosted solutions to support small businesses and media producers, and ensured alignment of infrastructure decisions with scalability, availability, and budget considerations.

SOFTWARE ENGINEER

**Float Left Interactive**

**May 2016 – Dec 2017**

- Built cross-platform OTT applications for Roku, Fire TV, Apple TV, Android, and iOS, shipping native apps in Brightscript, Kotlin, Swift, and JavaScript for the Flicast streaming platform.

TECHNICAL SKILLS

- Cloud Platforms & Infrastructure:** AWS (EC2, S3, IAM, Lambda, CloudFormation, CDK), Azure (Container Apps, ServiceBus, Front Door, Monitoring), GCP, Docker, Kubernetes (EKS, AKS, & OpenShift), Cloud Governance & Multi-Region Deployments
- Infrastructure as Code (IaC) & Automation:** GitHub Actions (complex workflows, custom actions), Terraform, AWS CDK, Jenkins (Groovy), Ansible, CI/CD Pipeline Design
- Programming & Scripting Languages:** Go, Python, TypeScript, Node.js/JavaScript, Bash, React, Angular, Java/Kotlin
- Microservices & Application Architecture:** RESTful APIs, Message Queues (RabbitMQ, Kafka Pub/Sub), Event-Driven Systems, Pub/Sub Messaging, High Availability & Compliance Tracking, Test Automation (Playwright, TDD)
- Monitoring, Observability & Reliability:** Prometheus, Grafana, Moogsoft AIOps, Azure Dashboards/Alerts, Monitoring Tools Integration, SLA Breach Reporting, Incident Response Automation
- Security & Compliance:** CI/CD Security Scans (Earlybird), Chaos Testing (DART), Compliance Validation (ECRU), Secure Deployment Practices

EDUCATION

**Bachelor of Science in Computer Science**

**Western Governor’s University**

**Aug 2026 (expected)**

**Associate of Arts in Computer Science**

**Palm Beach State College**

**Aug 2010**
