

OLIVIA (O. J.) WILCOX

(561) 248-1266 | WEST PALM BEACH, FL | OPEN TO REMOTE | oj@LearnWithOJ.com | linkedin.com/in/ojcodes

PROFILE SUMMARY

Senior SRE and DevOps Engineer who has shipped and run platforms from scrappy startups to Fortune 100. I design resilient cloud foundations with AWS CDK, Terraform, and GitHub Actions, run services on Kubernetes across AWS and Azure, and turn fragile pipelines into repeatable, observable systems. At American Express, I scaled an automation platform to 100k+ runs per month and cut deploys to under five minutes; At DataSnipper I led an AWS to Azure migration and built dashboards/alerts that tighten MTTR/MTTD. Calm in incidents, collaborative under pressure, and committed to clear communication that builds trust across teams.

Selected Impact:

- Led AWS-to-Azure migration, then designed real-time dashboards and alerting to reduce mean time to detect and recover incidents.
- Scaled enterprise automation to 1.2M+ runs per year by standardizing CI/CD pipelines and cutting deploys to under 5 minutes.
- Rearchitected monitoring stack to include third-party APIs with SLA-based breach alerting for external integrations.
- Delivered a Golang/Couchbase automation catalog from concept to production in roughly 3 months, accelerating developer onboarding.

RELEVANT EXPERIENCE

FOUNDER / SENIOR SITE RELIABILITY ENGINEER

Learn with OJ.

Oct 2025 – Present

- Designed, deployed, and maintained a cloud-native edtech platform on AWS/EKS with Terraform and GitHub Actions to run production-style reliability labs.
- Built CI/CD pipelines that build, scan, push to ECR, and deploy to EKS with rollback and basic policy guardrails.
- Implemented observability basics (metrics, logs, health checks) and simulated failures to validate recovery paths; documented troubleshooting steps..
- Produced clear runbooks, diagrams, and READMEs that explain design choices and operational procedures.

SENIOR SITE RELIABILITY ENGINEER

DataSnipper – Cloud Platform Team

Jan 2025 – Oct 2025

CLOUD INFRASTRUCTURE & IaC DEVELOPMENT:

- Engineered and deployed a multi-region cloud infrastructure using Terraform and GitHub Actions CI/CD, while ensuring scalable, secure, and automated environments that supported enterprise-grade reliability.
- Migrated core application workloads from AWS to Azure within tight deadlines, and collaborated with engineers to deliver a seamless transition leveraging Azure Container Apps, ServiceBus, and Front Door.

APPLICATION RELIABILITY, ENGINEERING & OPERATIONAL EXCELLENCE:

- Integrated SLO-based monitoring and alerting, drove system reliability, and reduced overall downtime risk by designing real-time dashboards and configuring Azure alerts for mission-critical metrics (e.g., CPU utilization).
- Partnered with Product Engineering to deliver live demos, enabled full adoption of new observability tools, and established automated performance thresholds and remediation pathways, with a strict focus on improving mean time to detect (MTTD) and resolve (MTTR) critical issues.
- Contributed to application modernization by migrating Playwright test suites from legacy Angular to a React-based architecture, while ensuring end-to-end reliability across evolving frameworks.
- Documented cloud infrastructure deployment processes, monitoring, and test migration frameworks, leaving behind repeatable, scalable playbooks for engineering teams.

ENTERPRISE SITE RELIABILITY ENGINEER & SENIOR SOFTWARE ENGINEER II

American Express - Global Infrastructure

Oct 2019 – Jan 2025

SITE RELIABILITY ENGINEERING & CLOUD INFRASTRUCTURE:

- Scaled SRE tooling to 100k+ automations/month, introducing Prometheus/Grafana + Moogsoft AIOps to shorten detection and response..
- Cut deployment times to < 5 minutes by standardizing GitHub Actions/Jenkins pipelines and containerizing services on OpenShift.
- Integrated observability and AIOps by leveraging Prometheus, Grafana, Moogsoft, and automation with Ansible, and enabled SLO-based monitoring and alerting, faster incident response, and improved system resiliency.

SOFTWARE ENGINEERING & SOLUTION ARCHITECTURE:

- Rebuilt API Monitoring tool into microservices with SLA monitoring for third-party APIs, adding REST, queues, alerters, and a React UI to prevent silent failures.

- Architected the Automation Catalog, a Golang service with a Couchbase backend and React UI for the Enterprise Automation Platform, and accelerated delivery from concept to production in just 3 months using Kanban methodology, compared to the 18–22 month project cycle of peer teams.
- Engineered ZEUS from scratch, in a 2-week sprint, a Flask-based compliance application to track High Availability Architecture adherence with DART (chaos testing) and ECRU (OpenShift data views).
- Implemented open-source Earlybird scans into CI/CD pipelines to strengthen code assurance and slash vulnerabilities across deployment workflows.

LEADERSHIP, MENTORSHIP & OPERATIONAL EXCELLENCE:

- Hired, mentored, and coached junior engineers, fostering open communication and friendly, constructive feedback culture.
- Standardized engineering best practices across a diverse stack, including Python, Golang, React, Couchbase, Kafka Pub/Sub, Slack integrations, and CI/CD automation, aimed at aligning development and SRE efforts with enterprise objectives.

SENIOR SOFTWARE ENGINEER

Dycom Industries - Field Systems

May 2018 – Oct 2019

SITE RELIABILITY ENGINEERING & CLOUD INFRASTRUCTURE:

- Developed multi-tiered, cloud-native systems to support remote construction teams with limited internet connectivity, leveraging Python, Node.js, Angular 6–8, Bash, and Terraform IaC to deliver resilient, field-ready applications.
- Evaluated and recommended a managed Kubernetes platform and designed cloud governance policies and architecture diagrams to strengthen infrastructure reliability and compliance for enterprise-scale telecom operations.

SOFTWARE ENGINEERING & SOLUTION ARCHITECTURE:

- Led build and release engineering for microservices applications using Node.js, Flask REST APIs, Angular 7 & 8 UIs, and RabbitMQ pub/sub messaging.
- Enhanced development workflows by architecting modular application designs, improving system maintainability, and accelerating feature delivery for clients, including AT&T, Verizon, and Comcast.

LEADERSHIP, MENTORSHIP & OPERATIONAL EXCELLENCE:

- Mentored junior engineers on writing robust unit tests and implementing monitoring tools, while promoting engineering best practices through peer reviews and process optimization.

TECHNICAL CO-FOUNDER

New Media Studios, LLC

Jan 2014 – Sept 2022

- Designed and deployed cloud-hosted solutions to support small businesses and media producers, and ensured alignment of infrastructure decisions with scalability, availability, and budget considerations.
- Delivered full-stack web and mobile development services, and provided tailored solutions that enabled local businesses to expand their digital presence and streamline operations.
- Oversaw end-to-end project execution, from requirements gathering to deployment and client training, while ensuring seamless integration of digital tools with creative workflows.

SOFTWARE ENGINEER

Float Left Interactive

May 2016 – Dec 2017

- Strengthened development efficiency and deployment reliability by implementing continuous integration and delivery pipelines, and ensured consistent release quality across smart TV and OTT applications.
- Led a code quality initiative that reduced development costs by embedding GitFlow workflows, git submodules, pull-request reviews, TDD practices, and CI/CD adoption, setting higher engineering standards across teams.
- Served as a polyglot developer on the Flicast flagship OTT/TVE platform, building quick-to-market native applications for Roku, Fire TV, Apple TV, Android, iOS, and smart TVs using Brightscript, Java/Kotlin, Objective-C/Swift 4, JavaScript, and Python.

TECHNICAL SKILLS

- **Cloud Platforms & Infrastructure:** AWS (EC2, S3, IAM, Lambda, CloudFormation, CDK), Azure (Container Apps, ServiceBus, Front Door, Monitoring), OpenShift Kubernetes, Cloud Governance & Multi-Region Deployments
- **Infrastructure as Code (IaC) & Automation:** Terraform, AWS CDK, Ansible, GitHub Actions, Jenkins (Groovy Pipelines), CI/CD Pipeline Design
- **Programming & Scripting Languages:** Python, Golang, Node.js/JavaScript, TypeScript, Bash, Brightscript, Java/Kotlin, Objective-C/Swift, Angular, React
- **Microservices & Application Architecture:** RESTful APIs, Message Queues (RabbitMQ, Kafka Pub/Sub), Event-Driven Systems, Pub/Sub Messaging, High Availability & Compliance Tracking, Test Automation (Playwright, TDD)
- **Monitoring, Observability & Reliability:** Prometheus, Grafana, Moogsoft AIOps, Azure Dashboards/Alerts, Monitoring Tools Integration, SLA Breach Reporting, Incident Response Automation
- **Security & Compliance:** CI/CD Security Scans (Earlybird), Chaos Testing (DART), Compliance Validation (ECRU), Secure Deployment Practices
